

EIKOSO

Multi Vitamins

Aquaculture Vitamin Supplement

Properties:

- Helps to build up the immune system by increasing the synthesis of immunoglobins and antibodies.
- Helps to improve liver function by improving metabolism of bile acid salts.
- Builds up muscle, skeletal system resulting in firmness.
- Combination of important trace vitamins helps to improve animal growth and general health.
- Enhances appetite in fish and prawns to improve feed conversion ratio.

Optimum shrimp and fish breeding conditions require that the concentration of animals not exceed 25-35 per square meter of pond. In practice however, pond density can often exceed 60-80 animals per square meter. As a result, excessive stress is put on the pond environment leading to a rapid depletion of naturally occurring food substances. To promote health and growth in the shrimp and fish population it is therefore imperative to supplement the animal diet with necessary vitamins and minerals lost because of overcrowding.

Vitamins play an important role in disease prevention and increasing immune protection mechanisms. Ailing shrimp and fish are normally able to intake less food, leading to further vitamin and mineral deprivation. It is therefore necessary to stimulate their

appetite in order for them to receive sufficient food and nutrients to combat disease and recover from illness.

Eikoso is widely accepted by the hatcheries profession as an important ingredient in promoting growth.

Eikoso is an advanced biotechnology product specifically formulated to deal with these problems. In particular it contains substances such as.

- Cobalamin (B12) – supports nervous system development.
- Advantages of Eikoso
- Contains high concentrations of important vitamin and mineral compounds. Easily dissolved in water or mixed with slurry foods. Can be used in conjunction with antibiotics.

Dosage :

5 grams of Eikoso mixed with 1 Kg of food served once per day in the morning for best results Or direct apply 5ppm into culture pond.
